

# Dinosaurs Week 2

## Friday

### Handprint dinosaur

Paint your hand and push this down onto a piece of paper (fingers open). You now have the body of your dinosaur which you can add detail to as you wish. Be sure to give your handprint dinosaur a name!!

## Size

### Height

How tall are you? Find a measuring tape and measure yourself - can you recognise the numbers on the tape measure? How tall are others in your family? If you don't have a measuring tape then use a marker on a wall and discuss what you can notice about the difference in height.

### Favourite dinosaur drawing

Pick your favourite dinosaur and draw a picture of them next to you. Label your drawing with your name and the name of your dinosaur. Could you challenge yourself to write a simple sentence about why that is your favourite dinosaur?

### Dinosaur sizes

Look at the size sheet on printable resources. Can you mark out how large these dinosaur footprints would have been? How does their footprint compare to the size of yours?

### Ice dinosaurs

In a cup, ice cube tray or container freeze any safe objects you have such as toy dinosaurs (or other small plastic toys). Your job is to try and chip away at the ice to save your toys. Can you tell your adult what you want to use to help you chip away at the ice? What is happening to the ice when it is out of the freezer? Are there other ways that you could free the frozen toys?
